## PROFILE

Passionate and driven game programmer with a strong desire to contribute meaningfully to the video game industry. I have a deep appreciation for games and the creative process behind building immersive, engaging experiences for players. This passion fuels my motivation to continuously improve my craft and explore new ideas within game development.

I thrive in collaborative environments, where communication and shared problem-solving lead to better results. With a strong eagerness to learn and grow, I aim to contribute to a dynamic team while further developing my skills as a game programmer and creator.

## SKILLS & ABILITIES

- Proficient in Unity & C#
- Solid understanding of HTML & CSS
- Experience with version control systems like GitHub & Plastic SCM
- Familiar with Steamworks API integration
- Good understanding of network programming using Fish-Networking
- Strong communication & collaboration skills
- Motivated to stay up to date with current trends & technologies
- Languages: Swedish (native) & English (fluent)

## Experience

### Studio Downstairs

June 2023 - Current

This is my own game studio, which I co-founded with three others shortly after finishing school. We were accepted into the Start-up Program at the Skövde Incubator, which provided valuable support during our early development phase. As a team, we have released one game, [Find or be Found](#).

Through this experience, I have gained extensive insight into both game development and the process of bringing a project to completion. In addition

---

to technical and production-related skills, I have also developed a strong understanding of the business side of running a studio, including company formation, administration, and day-to-day operations.

## EDUCATION

**University of Skövde, Game Programmer- *Bachelor***

August 2021 - June 2023
